

SUSTAINABILITY DEVELOPMENT

AT AMSTERDAM MARRIOTT HOTEL

Proudly holding the Gold Green Key certification, we demonstrate our ongoing dedication to environmentally responsible practices.

Energy and water conservation

Being careful with our energy and water consumption is an essential component of our strategy. Energy conservation efforts include installation of combined heat and power system for dual electricity and heating generation, complemented by gas boilers. We have applied sun protection foil, insulated water pipes, and installed sensor-based LED lighting and solar panels. Water conservation is ensured with low-flow faucets and showerheads.

Waste management

We are dedicated to reducing, separating, and recycling our waste. We provide recycling bins for both our guest and employees. In our kitchen, we have implemented a waste diversion program to minimize food waste. Additionally, we have a no single-use plastic policy in place and actively substitute plastic with eco-friendly alternatives such as wooden key cards, paper laundry bags, and refillable bottles.

Societal commitment

We take pride in our team representing over 35 nationalities, embracing inclusivity. Every year, we celebrate "Associate Appreciation Week", recognizing our associates' hard work and dedication. Through Marriott's Take Care program, we provide year-round support and educational opportunities. Additionally, we strive to enhance local communities by supporting organizations like War Child Holland.
