

SUSTAINABLE DEVELOPMENT

AT AMSTERDAM MARRIOTT HOTEL

Proudly holding the Gold Green Key certification, we continue to demonstrate our commitment to environmentally responsible practices.

ENERGY AND WATER CONSERVATION

Being careful with our energy and water consumption is an essential component of our strategy. Energy conservation efforts include installation of combined heat and power system for dual electricity and heating generation, complemented by gas boilers. We have implemented smart temperature control to optimize heating and cooling efficiency throughout the public spaces. Additionally, sun protection foil, insulated water pipes, sensor-based LED lighting and solar panels further contribute to reducing our overall energy usage. Water conservation is ensured with low-flow faucets and showerheads.

WASTE MANAGEMENT

We are dedicated to reducing, separating, and recycling our waste. Recycling bins are available for both guests and employees to encourage responsible waste disposal. Additionally, we have a no single-use plastic policy in place and actively replace plastic items with eco-friendly alternatives such as wooden key cards, paper laundry bags, and refillable water and ice stations that offer a convenient and sustainable way to stay hydrated.

SOCIETAL COMMITMENT

We take pride in our team representing over 35 nationalities, embracing inclusivity. Every year, we celebrate "Associate Appreciation Week," recognizing our associates' hard work and dedication. Through Marriott International's TakeCare program, we provide year-round support and educational opportunities. Additionally, we strive to enhance local communities by supporting organizations like War Child Holland.
