

FOR MORE SUSTAINABILITY

- 100% certified green electricity from renewable energy sources
- Motion sensors in public areas
- At least 75% of all light sources are energy efficient and at least 50% of all light sources are LED light sources
- Charging station for electric vehicles
- Automatically regulated kitchen exhaust air that only runs while cooking (CO₂ emissions savings: > 43,000 kg / year)
- UV window-foils on the south side of the building to prevent the rooms from heating up (electricity savings: > 43,000 kWh / year)

- No miniature bathroom amenities to reduce plastic waste
- Waste separation according to national legislation
- The separated waste is recycled by municipal or national waste disposal facilities, private companies or by our own facilities
- Precise planning of food quantities and passing on durable food leftovers in cooperation with "Too good to go"
- Registration of the total amount of food waste
- No use of disposable material for cups, plates and cutlery
- No single-use plastic bottles

- All guest rooms are equipped with water-saving hand showers and aerators with a maximum flow rate of 3.8 l / min (water savings: > 800,000 l / year)

- Green spaces / green roofing
- Organic waste is used to produce biogas
- No use of food from endangered or protected species

- Guests are informed about environmental issues and can participate in environmental projects (e.g. no daily towel and bedding change)
- Reusable laundry bags for guests and employees
- Guest information can be called up digitally via the TV system in the guest room

- Internal Green Team which works closely with hotel management to optimize sustainable and environmental processes
