

Environmental information to guests

Dear Guest,

Our hotel complies with a number of established environmental standards, allowing us to call ourselves a Green Key company.

To obtain the Green Key quality mark, we must meet a number of established environmental standards and conditions.

These include:

- implementing energy and water saving measures;
- reducing the amount of waste;
- separating waste into different fractions;
- comply with all environmental laws and regulations relevant to the hotel;
- drawing up an environmental program in which we indicate which measures we will implement over the next three years;
- informing our guests how we deal with the environment;
- registering consumption and costs of electricity, gas, water and waste on an annual basis.
- Training and making our employees aware of green entrepreneurship.

We hope to have informed you sufficiently in this way about the activities we carry out and the measures we take with regard to environmental management within our hotel.

For questions or further information, please contact reception. We hope that you will cooperate with us in maintaining the Green Key quality mark.
